

SUPREME COURT OF THE UNITED STATES

Tennant v. Jefferson County Commission

567 U.S. 758 (2012) · No. 11-1184 · Decided September 25, 2012

SUMMARY

The Supreme Court held that West Virginia's 2011 congressional redistricting plan did not violate the Article I, §2, requirement of population equality among congressional districts. Applying *Karcher v. Daggett*, the Court concluded that the plan's 0.79% population variance was justified by legitimate state interests, including avoiding county splits, preventing incumbent contests, and minimizing population shifts. The Court reversed the District Court's judgment and remanded for consideration of the plaintiffs' claims under the West Virginia Constitution.

CASE DETAILS

COURT	Supreme Court of the United States
WRITING FOR THE COURT	Per Curiam
JURISDICTION	Federal
DECIDED	September 25, 2012
DOCKET	11-1184
DISPOSITION	reversed_and_remanded
PROCEDURAL POSTURE	The state defendants directly appealed a three-judge District Court judgment enjoining implementation of West Virginia's congressional redistricting plan.
STANDARD OF REVIEW	The Court applied the two-prong <i>Karcher</i> standard for congressional redistricting population deviations: challengers must prove that the deviations could practicably be avoided, after which the State must show with some specificity that the deviations were necessary to achieve a legitimate state objective. The State's burden is flexible and requires consideration of the size of the deviations, the importance and consistency of the State's interests, and the availability of closer alternatives.
PRECEDENTIAL VALUE	binding
PARTIES	Natalie E. Tennant, West Virginia Secretary of State, et al. v. Jefferson County Commission, et al.

congressional redistricting

QUESTIONS PRESENTED

1. Whether West Virginia's congressional redistricting plan violated Article I, § 2 of the Constitution because its 0.79% population variance could have been reduced.
2. Whether the State demonstrated under *Karcher v. Daggett* that the population deviations were necessary to achieve legitimate, consistently applied state districting objectives.
3. Whether the case should be remanded for consideration of the plaintiffs' separate claims under the West Virginia Constitution.

HOLDINGS

1. The redistricting plan was constitutionally permissible because West Virginia carried its burden of showing that the minor population deviations were justified by legitimate state objectives.
2. The District Court erred in requiring the legislature to identify a discrete, numerically precise portion of the variance attributable to each districting policy.
3. The case was remanded for the District Court to address the remaining West Virginia constitutional claims in the first instance.

KEY QUOTATIONS

“This burden is a “flexible” one, which “depend[s] on the size of the deviations, the importance of the State’s interests, the consistency with which the plan as a whole reflects those interests, and the availability of alternatives that might substantially vindicate those interests yet approximate population equality more closely.” (567 U.S. at 760)

“Despite technological advances, a variance of 0.79% results in no more (or less) vote dilution today than in 1983, when this Court said that such a minor harm could be justified by legitimate state objectives.” (567 U.S. at 766)

“This is not to say that anytime a State must choose between serving an additional legitimate objective and achieving a lower variance, it may choose the former.” (567 U.S. at 767)

FACTUAL BACKGROUND

West Virginia retained its allocation of three congressional seats after the 2010 census but experienced population shifts within the State. The Legislature adopted S. B. 1008, which had a 0.79% population variance, did not split counties or place incumbents in the same district, and moved only one county, representing 1.5% of the State's population. Although the State conceded that plans with smaller population variations were possible,

it justified the variance by its legitimate interests in preserving county boundaries, avoiding incumbent contests, and minimizing population shifts between existing districts.

PROCEDURAL HISTORY

The Jefferson County Commission and two county commissioners challenged West Virginia's 2011 congressional redistricting plan. The United States District Court for the Southern District of West Virginia declared the plan null and void and enjoined its implementation. The state defendants appealed directly to the Supreme Court under 28 U.S.C. § 1253; the Supreme Court stayed the District Court's order, reversed, and remanded for consideration of the plaintiffs' unaddressed claims under the West Virginia Constitution.

DISPOSITION

reversed_and_remanded

REMAND INSTRUCTIONS

The District Court must address the plaintiffs' remaining claims under the West Virginia Constitution in the first instance.

SUPREME COURT OF THE UNITED STATES

NATALIE E. TENNANT, WEST VIRGINIA SECRETARY

OF STATE, ET AL. v. JEFFERSON COUNTY

COMMISSION, ET AL.

ON APPEAL FROM THE UNITED STATES DISTRICT COURT FOR

THE SOUTHERN DISTRICT OF WEST VIRGINIA

No. 11–1184. Decided September 25, 2012 PER CURIAM. Plaintiffs in this case claim that West Virginia’s 2011 congressional redistricting plan violates the “one person, one vote” principle that

we have held to be embodied in Article I, §2, of the United States Constitution. A three-judge District Court for the Southern District of West Virginia agreed, declaring the plan “null and void” and enjoining West Virginia’s Secretary of State from implementing it. App. to Juris. Statement 4. The state defendants appealed directly to this Court. See 28 U. S. C. §1253. Because the District Court misapplied the standard for evaluating such challenges set out in *Karcher v. Daggett*, 462 U. S. 725 (1983), and failed to afford appropriate deference to West Virginia’s reasonable exercise of its political judgment, we reverse. * * * Article I, §2, of the United States Constitution requires that Members of the House of Representatives “be apportioned among the several States . . . according to their respective Numbers” and “chosen every second Year by the People of the several States.” In *Wesberry v. Sanders*, 376 U. S. 1 (1964), we held that these commands require that “as nearly as is practicable one man’s vote in a congressional election is to be worth as much as another’s.” *Id.*, at 7–8. We have since explained that the “as nearly as is practicable” standard does not require that congressional

2 TENNANT v. JEFFERSON COUNTY COMMISSION

Per Curiam districts be drawn with “precise mathematical equality,” but instead that the State justify population differences between districts that could have been avoided by “a good-faith effort to achieve absolute equality.” *Karcher*, *supra*, at 730 (quoting *Kirkpatrick v. Preisler*, 394 U. S. 526, 530–531 (1969); internal quotation marks omitted). *Karcher* set out a two-prong test to determine whether a State’s congressional redistricting plan meets this standard. First, the parties challenging the plan bear the burden of proving the existence of population differences that “could practicably be avoided.” 462 U. S., at 734. If they do so, the burden shifts to the State to “show with some specificity” that the population differences “were necessary to achieve some legitimate state objective.” *Id.*, at 741, 740. This burden is a “flexible” one, which “depend[s] on the size of the deviations, the importance of the State’s interests, the consistency with which the plan as a whole reflects those interests, and the availability of alternatives that might substantially vindicate those interests yet approximate population equality more closely.” *Id.*, at 741. As we recently reaffirmed, redistricting “ordinarily involves criteria and standards that have been weighed and evaluated by the elected branches in the exercise of their political judgment.” *Perry v. Perez*, 565 U. S. ___, ___

(2012) (per curiam) (slip op., at 4). “[W]e are willing to

defer to [such] state legislative policies, so long as they are consistent with constitutional norms, even if they require small differences in the population of congressional districts.” *Karcher*, *supra*, at 740. In this case, plaintiffs claim that West Virginia’s redistricting plan, adopted following the 2010 decennial United States census, violates Article I, §2, of the United States Constitution and, separately, the West Virginia Constitution. The 2010 census did not alter West Virginia’s allocation of three congressional seats. But due to population shifts within the State, West Virginia nonetheless Cite as: 567 U. S. ____ (2012) 3 Per Curiam began redistricting to comply with the requirements in our precedents. In August 2011, the West Virginia Legislature

convened an extraordinary session, and the State Senate formed a 17-member Select Committee on Redistricting. The committee first considered a redistricting plan championed by its chair, Majority Leader John Unger, and dubbed “the Perfect Plan” because it achieved a population difference of a single person between the largest and smallest districts. That appears, however, to have been the only perfect aspect of the Perfect Plan. State legislators expressed concern that the plan contravened the State’s longstanding rule against splitting counties, placed two incumbents’ residences in the same district, and moved one-third of the State’s population from one district to another. The following day, members of the Redistricting Committee introduced seven additional plans. The committee eventually reported to the full Senate the eighth proposal, referred to as S. B. 1008. The full Senate rejected a ninth proposal offered as an amendment on the floor and adopted S. B. 1008 by a vote of 27 to 4. The House of Delegates approved the bill without debate by a vote of 90 to 5. Governor Earl Tomblin signed the bill into law on August 18, 2011. 2012 Supp.), does not split county lines, redistrict incumbents into the same district, or require dramatic shifts in the population of the current districts. Indeed, S. B. 1008’s chief selling point was that it required very little change to the existing districts: It moved just one county, representing 1.5% of the State’s population, from one district to another. This was the smallest shift of any plan considered by the legislature. S. B. 1008, however, has a population variance of 0.79%, the second highest variance of the plans the legislature considered. That is, the popu-

4 TENNANT v. JEFFERSON COUNTY COMMISSION

Per Curiam lation difference between the largest and smallest districts in S. B. 1008 equals 0.79% of the population of the average district. The Jefferson County Commission and two of its county commissioners sued to enjoin the State from implementing S. B. 1008. At trial, the State conceded that it could have adopted a plan with lower population variations. The State argued, however, that legitimate state policies justified the slightly higher variances in S. B. 1008, citing this Court’s statement from *Karcher* that “[a]ny number of consistently applied legislative policies might justify some variance, including, for instance, making districts compact, respecting municipal boundaries, preserving the cores of prior districts, and avoiding contests between incumbent Representatives.” 462 U. S., at 740. The State noted *Karcher*’s approving reference to a District Court opinion upholding a previous West Virginia redistricting plan with a population variance of 0.78%—virtually identical to the variance in S. B. 1008. See *id.*, at 740–741 (citing *West Virginia Civil Liberties Union v. Rockefeller*, 336 F. Supp. 395 (SD W. Va. 1972)). The District Court nonetheless granted the injunction, holding that the State’s asserted objectives did not justify the population variance. With respect to the objective of not splitting counties, the District Court acknowledged that West Virginia had never in its history divided a county between two or more congressional districts. The court speculated, however, that the practice of other States dividing counties between districts “may portend the eventual deletion” of respecting such boundaries as a potentially legitimate justification for population variances. App. to Juris. Statement 15, n. 6. The court also faulted the West Virginia Legislature for failing “to create a contemporaneous record

sufficient to show that S. B. 1008's entire 4,871-person variance—or even a discrete, numerically precise portion thereof—was attributable” to Cite as: 567 U. S. ____ (2012) 5 Per Curiam the State's interest in respecting county boundaries and noted that several other plans under consideration also did not split counties. *Id.*, at 15, 16. The court further questioned the State's assertion that S. B. 1008 best preserved the core of existing districts. Preserving the core of a district, the court reasoned, involved respecting the “ ‘[s]ocial, cultural, racial, ethnic, and economic interests common to the population of the area,’ ” *id.*, at 17 (quoting *Graham v. Thornburgh*, 207 F. Supp. 2d 1280, 1286 (Kan. 2002)), not a “dogged insistence that change be minimized for the benefit of the delicate citizenry,” App. to Juris. Statement 20. The District Court concluded that although acclimating to a new congressional district and Congressperson “may give rise to a modicum of anxiety and inconvenience, avoiding constituent discomfort at the margins is not among those policies recognized in *Karcher* as capable of legitimizing a variance.” *Ibid.* With respect to preventing contests between incumbents, the District Court again faulted the legislature for failing to build a record “linking all or a specific part of the variance” to that asserted interest. *Id.*, at 22. And the District Court found that although 0.79% was a minor variation when *Karcher* was decided, the feasibility of achieving smaller variances due to improved technology meant that the same variance must now be considered major. Because the District Court concluded that the redistricting plan was unconstitutional under Article I, §2, it did not reach plaintiffs' challenges under the West Virginia Constitution. Chief Judge Bailey dissented. He argued that the record demonstrated the legitimacy of the State's concerns, and that no other plan satisfied all those concerns as well as S. B. 1008. He also took issue with the majority's disregard for *Karcher's* characterization of 0.78% as an acceptable disparity. App. to Juris. Statement 39. We stayed the District Court's order pending appeal to

6 TENNANT v. JEFFERSON COUNTY COMMISSION

Per Curiam this Court, 565 U. S. ____ (2012), and now reverse. Given the State's concession that it could achieve smaller population variations, the remaining question under *Karcher* is whether the State can demonstrate that “the population deviations in its plan were necessary to achieve some legitimate state objective.” 462 U. S., at 740. Considering, as *Karcher* instructs, “the size of the deviations, the importance of the State's interests, the consistency with which the plan as a whole reflects those interests, and the availability of alternatives that might substantially vindicate those interests,” *id.*, at 741, it is clear that West Virginia has carried its burden. As an initial matter, the District Court erred in concluding that improved technology has converted a “minor” variation in *Karcher* into a “major” variation today. Nothing about technological advances in redistricting and mapping software has, for example, decreased population variations between a State's counties. See *id.*, at 733, n. 5. Thus, if a State wishes to maintain whole counties, it will inevitably have population variations between districts reflecting the fact that its districts are composed of unevenly populated counties. Despite technological advances, a variance of 0.79% results in no more (or less) vote dilution today than in 1983, when this Court said that such a minor harm could be

justified by legitimate state objectives. Moreover, our cases leave little doubt that avoiding contests between incumbents and not splitting political subdivisions are valid, neutral state districting policies. See, e.g., *id.*, at 740. The majority cited no precedent for requiring legislative findings on the “discrete, numerically precise portion” of the variance attributable to each factor, and we are aware of none. The District Court dismissed the State’s interest in limiting the shift of population between old and new districts as “ham-handed,” *id.*, at 19, because the State considered only “discrete bounds of geography,” rather than “[s]ocial, cultural, racial, ethnic, and economic interests common to the population of the area.” *Id.*, at 17 (quoting *Graham v. Thornburgh*, *supra*, at 1286). According to the District Court, that did not qualify as “preserving the cores of prior districts” under *Karcher*, 462 U. S., at 740–741. Regardless of how to read that language from *Karcher*, however, our opinion made clear that its list of possible justifications for population variations was not exclusive. See *id.*, at 740 (“Any number of consistently applied legislative policies might justify some variance, including, for instance, . . .”). The desire to minimize population shifts between districts is clearly a valid, neutral state policy. See, e.g., *Turner v. Arkansas*, 784 F. Supp. 585, 588–589 (E.D. Ark. 1991), summarily affirmed, 504 U. S. 952 (1992). S. B. 1008 achieves significantly lower population shifts than the alternative plans—more than four times lower than the closest alternative, and more than 25 times lower than others. None of the alternative plans came close to vindicating all three of the State’s legitimate objectives while achieving a lower variance. All other plans failed to serve at least one objective as well as S. B. 1008 does; several were worse with respect to two objectives; and the Perfect Plan failed as to all three of the State’s objectives. See App. to Juris. Statement 43–45. This is not to say that anytime a State must choose between serving an additional legitimate objective and achieving a lower variance, it may choose the former. But here, given the small “size of the deviations,” as balanced against “the importance of the State’s interests, the consistency with which the plan as a whole reflects those interests,” and the lack of available “alternatives that might substantially vindicate those interests yet approximate population equality more closely,” *Karcher*, *supra*, at 741, S. B. 1008 is justified by the

8 TENNANT v. JEFFERSON COUNTY COMMISSION

Per Curiam State’s legitimate objectives. Because the District Court did not reach plaintiffs’ claims under the West Virginia Constitution and the issue has not been briefed by the parties, we leave it to the District Court to address the remaining claims in the first instance. The judgment of the United States District Court for the Southern District of West Virginia is reversed, and the case is remanded for further proceedings consistent with this opinion. It is so ordered.
